Subject: Enhancement of e-services at Khalifa Port Container Terminal

Dear Valued Customer,

Ref: KPCT/2016/CIR/01

We are pleased to announce the following e-service enhancements to the ADT Web Portal.

From:
Abu Dhabi Terminals

Online Booking (For Shipping Lines Only)

An upgrade to the online booking system now allows shipping lines/agents to control and monitor their container bookings effectively. Shipping lines/agents will now be able to create four separate types of booking as per their requirements, namely: MTY out – EXP In, MTY Out (Offhire), MTY In and EXP In.

To:
All Shipping Lines,
Agents, Traders,
Transporters and Port
Users

Truck Visit Appointment (TVA)

The *Container Appointments* application will be merged with the *Truck Visit Appointment* e-service. The enhancement provides customers with the following additional benefits:

- Direct check-in of appointment (without saving provisional appointment);
- “Suggest” button that offers the next appointment to complete the cycle, for example after an “MTY Out” the system will propose for that same container an “EXP In” appointment slot;
- Facility to download old truck visit appointments.
- Query as to whether a container is available for creating appointment.
- Facility to view all container numbers by just entering the Bill of Entry number.
- Bulk appointment creation and bulk check-in.

Shipper Owned Container (SOC) Release/Acceptance Procedure

All SOC laden import containers will be considered as a one-way delivery with immediate effect.

The accepting shipping line/agent will have to create an appropriate booking using ADT online booking system for SOC return containers (Laden & Empty), whether on same or alternative line. Users will not be able to create truck visit appointment for SOC containers (RM & RE) if there is no valid booking for that particular container in ADT system.
